(54) DATA BASE EXCHANGE SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a data base exchange system by which the compatibility of each DB is secured when data are changed, etc., in a server DB and a client DB.

SOLUTION: A computer system is constructed by providing a server computer 10 having a server and relation data base (server DB) connected to a network and a client computer 12 having a local and relation data base (local DB) being connection possible to the network and, then, data of the server DB and data of the local DB are exchanged in a data base exchange system. The data base exchange system is provided with means (synchronizing control part, etc.), 12 and 13 for executing control to permit non-coincidence between server DB data and local DB data to coincide with latest contents.
